

Save Up To 30%* On Your Annual Energy Bills!

Better Performance

Properly installed energy efficient improvements deliver better protection against cold, heat, drafts, moisture, pollution and noise. An ENERGY STAR home helps ensure consistent temperatures between and across rooms, improved indoor air quality and greater durability.

Lower Ownership Cost

Compared with industry standard construction, ENERGY STAR qualified homes use substantially less energy for heating, cooling and water heating. Over the years this means saving thousands of dollars on your family's energy bills.

A Smart Investment

By the end of the decade, more than 2 million homes are expected to earn the ENERGY STAR. The trend is clear. By choosing a home today with the ENERGY STAR label, you can be confident that your home will have increased value when the time comes to sell.

Protect The Environment

Did you know that your home can be a greater source of pollution than your car? In fact, 16 percent of U.S. greenhouse gas emissions are generated from the energy used in homes nationwide. Simply put, the less energy your home uses the more friendly it is to our environment.

Peace Of Mind

Home buying is complex enough without having to know all the details of energy efficient construction. Inverness helps take the worry and guesswork away from building the home of your dreams by providing your family a home that meets or exceeds the ENERGY STAR strict energy efficiency guidelines.

*Saving compared to a home built to the 2004 International Residential Code (IRC)
